DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Wallace (U.S. 6,468,284).

Wallace discloses the claimed invention in figures 1-7 and (col. 5, line 50 to col. 7, line 42), an obstetrical vacuum (10) having a bell-shaped vacuum cup (12), a hollow stem (16), and a separate handle grip (24) with a pull-sensing grip (at 26) detachably connected to said forceps; means (70) for electronically measuring the magnitude of extraction forces exerted on said grip (at 26), wherein the measuring means (70) is disposed within said handle (24); means (56) for transmitting data regarding measured extraction forces and means (col. 7, lines 17-19) for receiving said data regarding measured extraction forces; a strain gauge (52); and means (col. 7, lines 36-42) for generating an alarm comprises a speaker; wherein the means for receiving the extraction forces and the graphic representation of the extraction forces of Wallace device, is inherently capable of being wireless to a lap top computer with specific software.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lower et al. (U.S. 3,785,381) discloses a pressure sensing obstetrical forceps.
